

Profile

I'm a passionate gamer and an aspiring Game Developer who loves to create and design and aim for good results. I strive to further my knowledge in Game Development and make use of my two years of experience in C# coding in Unity alongside other programming languages.

Due to my love for games from a young age, I decided to embark on a path as a Game Developer. I've learned and grown a lot throughout my years in school thanks to the help of my lecturers and peers around me. I aspire to apply my skills towards the gaming industry to make games in the near and far future to similarly inspire the future generation of gamers.

Chelsea Diane Balane Paquibot

Game Programmer & Designer

Projects

Jan 2026 - Mar 2026

Rats and Roombas - 2 Person Group [Unity 3D]

- Rats and Roombas is a 2 person Co-Operative Game where two players control two rats and collect food before the time limit, while avoiding AI Roombas.
- I worked as a programmer and was responsible for player movement, enemy AI and targeting, teleportation, knockback on collision, and player life system. Also implemented collectible systems and unique player abilities.

Oct 2025 - Jan 2026

Too Cube - Individual [Unity 3D]

- Too Cube is a Single Player Cube Puzzle Game where the player gets sucked into an alternate dimension and split into two souls and goes through puzzles to fuse back into one.
- This was an individual project. Level layout, player movement, puzzle mechanics and UI were programmed solely by me.

Oct 2025 - Dec 2025

Balloon Joyride - Individual [Unreal Engine 4]

- Balloon Joyride is a Single Player Endless Runner where you collect balloons and use them to fly and gain more points.
- This was an individual project and my first exposure to Unreal Engine 4. I worked on aspects such as player movement, implementing unique obstacles, points system, collection of coins, magnets and balloons, and flight system.

Oct 2025 - Mar 2026

Elementra - 8 Person Group Work [Unity 3D]

- Elementra is a magical fantasy, fusion based, puzzle-strategy tower defense game for PC.
- I worked as a programmer in charge of core game mechanics including enemy AI, tower targeting logic, damage systems, unique tower abilities, and tower placement system mechanics.

Apr 2025 - Sep 2025

MAD Over You - 8 Person Group Work [Unity 2D]

- MAD Over You is a 2D Otome Game with Balatro-Esque card game aspects.
- I worked as an Artist and Game Designer and was in charge of the art assets in this game.

Education

2023 - Present

Singapore Polytechnic

- Diploma in Media, Arts & Design. Specialization in Animation & Games, Immersive Media Track.
 - Co- Curricular Activities (SP Life Arts)
 - Class Representative for Year 2 Semester 2 Class AG05
